

## T-Shirt Quilt Top

### **Class Supply List:**

**UNCUT** t-shirts and sweatshirts (12 for twin size, 20 for double size). Don't leave your favorite shirt out of the pile because it is worn; we breathe new life into them when we treat them.

Pellon lightweight fusible interfacing 906F – ½ yard **per shirt** you plan to put in the quilt top. This is available at Lakeshore.

Large cutting mat (big enough to cut a shirt on)

Rotary cutter – 45mm or bigger

Cutting ruler – at least 24 inches long

1 piece of poster board, any color

½ yard of muslin or other pressing cloth

Iron and pressing surface (we have three in the classroom; this may or may not be enough for everyone to have one, depending on class size.)

Scissors (one for cutting poster board, one for cutting fabric)

Sewing machine in good working order and your own sewing supplies (**week two only**)

Quarter inch piecing foot (Piecing foot with guide is best but you can also use a magnetic seam guide if you prefer...these are available at Lakeshore.) (**week two only**)

During the first session, you will not need your machine. We will decide on the size(s) of your shirts, treat the shirts, cut the shirts, and determine size of your quilt. Based on the size of your quilt, we will determine amount of fabric needed for borders and sashes.

**You will have homework after the first session: treating and final cutting of any shirts you don't get finished in class, cutting the border and sash fabric, sewing the border fabric.**

During the second session, we will assemble the quilt top. There will also be a discussion of backing fabric, types of batting, and a demonstration of a double faced mitered corner binding. **The quilt will be finished outside of class time.**
